**Subject:** Changes at Port Discovery Seafarms winter 2017  
**Attachments:** grey sediments winter 2017.JPG; P1030324.JPG; sheen on bay 4-25-17 (2).JPG; Main Farm, dead crab, eel grass.JPG; gold mussel 4-30-17.JPG

During the winter of 2017 Port Discovery Seafarms was engulfed with several plums of low salinity water that left a thick coating of a grey substance (photo)

During this period the waters of the bay were at times abnormally clear (P1030324)

The Bay was often coated with an oily sheen

Rafts of dead eel grass and dead crab washed up and the beach cobble looked as if it had been dipped in acid.

A gold colored coating precipitated onto mussels.
